

Passage One

Questions 46 to 50 are based on the following passage.

Why are we so worried about our careers? Partly it's to do with money, but there's a psychological aspect to our fears as well.

We worry because we suspect—not wrongly—that the world is full of a frightening sort of person ready to judge us ruthlessly and swiftly: a person we can call a snob.

h of their attention we deserve. In the past, that might be your ancestry and royal connections. Nowadays, a snob cares about one thing only: what you do for a living.

This explains why the first question we will be asked in any new social context is ‘What do you do?’ and according to how we answer, snobs will either welcome us with broad smiles, or leave us in the cold.

And that is why we are fired up by such a desperate urge to achieve and impress.

Sometimes our behaviour is mistaken for greed and vanity, but it is more than this. A lot of our interest in fancy cars, jobs and houses has nothing to do with materialism. It has to do with a hunger for the respect and esteem that is only available in our societies through the acquisition of material goods. It isn’t the goods themselves we seek, it is the love we stand to gain through our possession of them. The next time we see someone driving a Ferrari, we shouldn’t condemn them for their greed, we should pity them for the intensity of their need for love from the world.

At the root of snobbery is a lack of imagination and confidence about how to decide who in the world is valuable. The snobs are brutally misguided and slavish in their beliefs about how the superior individuals can be identified. For snobs, it is the already acclaimed and already successful who are the only ones worthy of respect. There is no room in their timid regimented minds to imagine that someone might be clever, kind or good—and somehow have been overlooked entirely by society, their qualities lying hidden beneath an unfamiliar veil. They are having as yet discovered no obvious outlet.

The true answer to snobbery is not to say that there is no such thing as a better or worse person, but to insist that better or worse exist in constantly unexpected places and carry none of the outward signs of distinction. And because we are such poor judges of the worth of others, our ultimate duty remains to be kind, good, curious and imaginative about pretty much everyone who ever crosses our path.

What gives rise to our worry about careers apart from money?

- A) Fear of being judged in a snobbish manner.
- B) The prospect of facing fault-finding managers.
- C) The ruthless way employees are often treated.
- D) Fright at the difficulty in hunting for a job.

What do we learn from the passage about today’s snobs?

- A) They try hard to dig into a person’s past.
- B) They draw a rigid conclusion about people.
- C) They judge a person by their occupation.
- D) They tend to place people in a social context.

What does the author say about people’s interest in material goods?

- A) It is the cause for condemnation of their greed.
- B) It has a lot to do with the comforts they provide.
- C) It arouses pity rather than respect from the wealthy.
- D) It arises from their craving for social recognition.

What kind of people do snobs deem worth respect and esteem?

- A) Those with fame and fortune.
- B) Those with regimented minds.
- C) Those with intelligence and imagination.
- D) Those with qualities lying hidden in disguise.

What does the author imply we should do to avoid being snobbish?

- A) Be aware there has never been such a thing as a better or worse person.
- B) Be kind to and curious about those who we happen to meet in our lives.
- C) Realize that better or worse keeps changing in unexpected ways.
- D) Judge people on the basis of their distinctive character traits.

Questions 51 to 55 are based on the following passage.

Women have historically been paid less. But in the US in the 1980s, they began to catch up—fast. During that decade, the gender pay gap closed by about one percentage point a year. Had that trend continued, the gender pay gap would have been closed by 2017.

But the trend didn't continue, and the gap remains yawning.

According to a new study from academics at Harvard, the stagnation can be put down, perhaps counterintuitively, to the introduction of state and federal family leave policies.

The academics argue that during the 1990s, as governments began to introduce leave policies, it was mainly women who took advantage of them. Though the leave policies might have helped those women to stay in the workplace—instead of dropping out to have families—those who returned saw their wages had increased at lower rates than the men.

After family leave was introduced in the US, in fact, the rate of gender wage convergence fell to just 0.05 percentage points per year, and has remained there ever since.

Those monitoring the process towards salary equity at work have long watched as progress slowed in many countries around the world. In fact, that progress began to reverse during the *pandemic* (大流行病).

The gender pay gap is one of the most outstanding examples of that lack of *parity* (平等), and still exists in some form about everywhere. The motherhood penalty has become a shorthand for describing why: In many places, especially rich countries, women earn the same as men until they reach their childbearing years. Women who have children begin to see their salaries slip behind their male counterparts.

Part of this is because women take on more of the unpaid labor at home, which can eat into time available for work and energy for career advancement. But it's also because mothers are passed over for raises and promotion, and because time out of the workplace sets women back, even if that time is taken voluntarily, and even if it is supported by company or government policy.

What would have happened if leave policies hadn't been introduced? The study doesn't go into that question, but it is more than to say that if the 1980s trend continued, we would have been at parity by now.

It's possible, however, that the journey towards wage parity would have stalled either way. If women's gains in the 1980s were made through the erasure of things like bias, once those less uncontrollable problems had been addressed, there would still have been an issue with women—who are the ones to bear children and take care of them in the early weeks because of biological factors like the ability to breastfeed, forcing them to take breaks whether or not those breaks were mandated.

What do we learn about the gender pay gap in the US during the 1980s?

- A) It was being slowly closed.
- B) It was shrinking rapidly.
- C) It started to yawn.
- D) It remained substantial.

What happened with the introduction of state and federal family leave policies?

- A) The process towards salary equity at work began to reverse.
- B) The rate of gender wage convergence started to fall noticeably.
- C) The trend of women returning to work after childbirth started.
- D) The narrowing of the gender pay gap attracted more attention.

What partly accounts for the slip in women's salaries?

- A) The insufficient motivation women generally have for career advancement.
- B) The opportunities numerous women give up for pay raise and promotion.

D) The lack of policy support from government and business corporations.

What does the new study say about wage parity?

A) It would have stalled if those controllable problems had not been addressed.

B) It would have halted if company and government had not worked together.

C) It would have been achieved with the complete erasure of gender biases.

D) It would have been attained with the continuation of the 1980s trend.

What prevents women from achieving parity with men in the final analysis?

A) Ignoring biases against women in the workplace.

C) Failing to mandate breaks for childbirth and care.

B) Giving birth to children and taking care of them.

D) Lacking resources to address biological problems.
