

In her second year, Charlene Duong learned of the use of poisonous, synthetic pesticides on her college campus. Shocked but not surprised, she knew she had to do something. Along with a couple of classmates, Charlene did a quick web search and discovered a small but growing movement led by the organization, Herbicide-Free Campus (HFC), to rid college campuses of artificial *herbicides* (灭草剂). They were 26.

Like many, Charlene experiences climate anxiety—a 27 fear of a climate catastrophe—and was, at the time, looking for an 28. When she discovered the HFC movement, she said she felt she “had found a specific area of focus on that still fit into the larger picture of fighting for a healthier, safer, cleaner 29 for all.”

Toxic herbicide use in university land care is not unique. Most institutions of higher education rely on synthetic pesticides and fertilizers to achieve 30 goals. Having a “beautiful” campus means green and perfectly maintained lawns along with flower beds and paved sidewalks. But these 31 managed campuses can come at a cost: increased cancer risk, 32 waterways, poisoned wildlife and lifeless soil.

cts or unwanted plant life can increase indirect __33__, as they can include petroleum-based ingredients. Pesticides also decreases the life in soil, __34__ the ability of soils to absorb carbon or retain water and thus reducing campuses' ability to recover quickly from climate-related extreme weather events like droughts and floods. Instead of using toxic chemicals, students working with HFC help out with __35__ the campus grounds. "This work reminds me to be in the present moment as I play my role in reducing herbicide use and keeping my campus safe and healthy," says Charlene.

- A) aesthetic
- B) chronic
- C) contaminated
- D) conventionally
- E) emissions
- F) environment
- G) hampering
- H) incidentally

- I) infringement
- J) intrigued
- K) juvenile
- L) outlet
- M) rotating
- N) vibrations
- O) weeding
